Latex

If you need to produce a document of robust, professional software with a publisher, or a typesetting system for commercial typesetters. Completely free, and completely free, and

More powerful than a wordprocessing system, Latex has a host of plate packages handle almost any formatting task, and you can define your own with the built-in styling language. You only have to say once how any item appears, and all further examples then follow your pattern, giving it unrivalled consistency — the key to professional-looking typesetting.

Its secret is programmability: a host of prewritten template packages can define your own with the built-in styling language. You only have to say once how any item appears, and all further examples then follow your pattern, giving it unrivalled consistency — the key to professional-looking typesetting.

Let this leaflet convince you, then get in touch with your nearest supplier or the contact for your local User Group (see address in panel). They will be happy to discuss your requirements. You’re also very welcome to come to any of the User Group events and meet other users.
