

One needs the functions from **mathmlPlot** in **examples/**.

```
[*]  
inFile <- system.file("data/mathmlQuadratic.xml", "XML")  
d <- xmlTreeParse(inFile)  
plot(1:10, type="n")  
text(5,5, mathmlPlot(d))
```

```
[]  
u <- xmlTreeParse("data/mathmlRoot.xml")  
text(5,7,mathmlPlot(u))
```

```
[]  
u <- xmlTreeParse("data/mathmlSet.xml")  
text(5,9,mathmlPlot(u))
```
