The **HEP-ACRONYM** package*  
An acronym extension for glossaries

Abstract  
The **HEP-ACRONYM** package provides an acronym macro based on the **glossaries** package. Acronyms are implemented using the **glossaries-extra** package [1] which is an extension of the **glossaries** package [2] and must be loaded after the **hyperref** package [3]. It can be loaded using \usepackage{hep-acronym}.

\acronym{\textit{type set abbreviation}}{\textit{abbreviation}}{\textit{*}}{\textit{definition}}{\textit{plural definition}} macro generates the singular \textit{abbreviation} and plural \textit{abbreviation}s macros.

The first star prevents the addition of an ‘s’ to the abbreviation plural. The second star restores the TeX default of swallowing subsequent white space. The long form is only shown at the first appearance of these macros, later appearances generate the abbreviation with a hyperlink to the long form. Capitalisation at the beginning of paragraphs and sentences is (mostly) ensured. The long form is never used in math mode which can be exploited to enforce the short form. In order to enforce the long form use \textit{abbreviation}\textit{long}. As there can be no fixed rule whether to use the long form or the short form in section headers the user is left to their own devices e.g. \glsdesc{\textit{abbreviation}}, \Glsdesc{\textit{abbreviation}}. The \sentence macro ensures that the directly following abbreviation is capitalised.

\shortacronym{} \longacronym{} The \shortacronym{} and \longacronym{} macros are drop-in replacements of the \acronym{} macro showing only the short or long form of their acronym.

\resetacronym{} The first use form of the acronym can be enforced by resetting the acronym counter with \resetacronym{\textit{key}}.

\dummyacronym{} If the acronym counter equals one at the end of the document the short form of the acronym is not introduced. Placing a \dummyacronym{\textit{key}} at the end of the document ensures that the short form is introduced.

warning In order to reduce the number of potentially conflicting packages the **glossaries** package is loaded without any glossary style. In the case that the glossary should be printed additional packages must be loaded via e.g. \usepackage{glossary-list}.
