## **L<sup>A</sup>T<sub>E</sub>X** Class `yb-book`

by Yegor Bugayenko

Rendered on 2022/01/03

Ver. 0.1.0

The provided class `yb-book` helps me design my books and publish them on Amazon.

There are a few class options you can use:

`compact` – when you need to make text more compact and take less vertical space;

`manuscript` – when the format is not for Amazon printing, but for some other purposes (the page size is A4), like the document you are reading right now;

`draft` – when it's a draft for reviewers (the page size is A4) and you want to have a watermark and a compact form of the content;

## **Printers**

There are a number of printers, commands that print large blocks of text in the expected format:

`\ybPrintTitlePage` – prints the first page of a book.

`\ybPrintTOC` – prints the table of contents.

`\ybQuote` – prints a side quote.

`\ybPrintBibliography` – prints the list of bib references.

`\ybPrintIcons` – prints your social icons.

`\ybPrintIndex[1]` – prints index with an optional name of the section (instead of “Index”).

For more samples, check the directory `samples/`.

You are welcome to suggest additional commands, but the style of my books is intentionally as simple as possible, avoiding formatting as much as possible.
